Chuo-Sogo Procure user guide (trial 1.0.0)

Software that does a factory's buying work, with AI.

---

1. Install

1. Save and open **ChuoSogo-Setup.exe** (about 300 MB) from the download page.
2. If Windows says "Windows protected your PC", choose "More info" → "Run anyway" (the trial is not signed).
3. Follow the installer and start Chuo-Sogo Procure.

---

2. First start: choose how to use it

1. **Connect to a server**: the trial server. Use the role buttons on the sign-in screen (factory requester, buyer, approver, finance, our staff) to try each role. The trial server holds fictional sample data.
2. **Use on this PC only**: everything runs on one PC. Enter the factory name and an admin email and password.
3. In this-PC-only mode, install the **additional data** (about 10.8 GB): the high-accuracy AI for PCs with 16 GB of memory, the light AI for 8 GB. Downloads resume after interruptions and every file is checked by its SHA-256 fingerprint.

---

3. The workflow (follow the "where are we" guide on each request)

1. **Request**: the factory says what it needs; paste text or a file and the AI reads the items (you confirm them).
2. **Identify**: our staff confirm part numbers.
3. **Quote**: the AI suggests about 10 suppliers with reasons; our staff **check** before the request goes out; remind suppliers who have not replied.
4. **Read replies**: email, PDF, Excel and FAX replies are read by the AI into the quotation form; staff check and save.
5. **Compare and recommend**: our staff **check** the comparison before the factory sees it.

6. **Approve and order**: the factory approves and orders with its own PO number; delivery dates are followed and late orders flagged.
7. **Receive and invoice**: goods receipt and supplier-invoice matching close it.

---

4. Useful pages

1. **Savings**: how much each price went down and our fee (50% of the drop); no drop, no fee.
2. **Purchase history → Where you can save**: items with the most room to save, from past records.
3. **Records**: quotations, orders and invoices searchable by date, amount and counterparty (電子帳簿保存法); received files are kept as received.
4. **Mail inbox** (our staff): assign replies and FAXes that could not be matched automatically.

---

5. Easier to read

1. **Settings → Reading comfort**: text size (normal, large, extra large) and high contrast.
2. Every button has a word on it, and actions that cannot be undone ask first.

---

6. About the trial

1. Live email and FAX sending is switched off; messages are only recorded.
2. Feedback and problems: vishnu.s@chuo-sogo.net

This guide was prepared by an AI assistant (Claude).
